

## ACE - BREWING PREPARATION LIST

### HOOK-UPS

- The brewer operates on a 24V system supplied by a transformer plugged into a standard 110/240V wall outlet. We suggest a location within 4 feet from machine.
- The water supply is a 1/4" PE tube equipped with a 1/4" female fitting.
- Purchase - 1/4" flex PE tubing from water source to location of ACE Brewer.
- Ensure water pressure in supply hook-up provides 80 PSI of water pressure with optimal performance between 90-110 PSI. A pressure kit is available for purchase to provide necessary water pressure.

### BREWING ACCESSORIES

- (1) Pre-Infusion or Mixing Bin - Five Gallon (20 Liter) Cambros - Used for pre infusing of coffee before brewing. Suggest purchasing a lid and cutting out corner to place pre-infused coffee into the brewing vessel.
- (1) Large Bakers Paddle - used to mix coffee grounds and water for pre-infusion. *Wood is ok but stainless is best for long term sanitation. Should be fairly beefy (at least 24" long).*
- (1) Refractometer - Suggested - Used for measuring concentration. The VST brand is expensive but worth it.
